Ideal Cryptography

The only ideal cryptography is Alien Characters and Sigils, because there is no base 8 binary instruction set for them... One-Time Pads can be enumerated on any 512 GB SSD... Luks Drive Encryption, SHA1, AES-256 have all been Mathematically Cracked... On any Linux or FreeBSD System you can draw them in Gimp/Mtpaint and use the Alien Character or Sigil Cipher Pad with it...

This is literally what is used by Secret Societies.
